Research Proposal for

Student Partnering with Faculty/Staff Research Programs

Natural Science

Title of the proposed research project

____

Part I

1. Project context (including research significance, research overview and prospect in China and abroad, and importance of the proposed study. A list of references should be provided).

2. Project description, objectives, and the key scientific problems to be solved (this section should be detailed and explicit).

3. Research approach and methodology, as well as feasibility analysis (including the description of the research methodology, technical route / roadmap, experimental methods, key technologies, etc).

4. Originality and innovative aspects of the proposed study.

5. Annual research plan and expected results (including important academic exchange activities to be organized, international cooperation and exchange programs, etc.).

Part II

1. Basis and prior research (prior research work related to the proposed project and related outcomes achieved in the past).

2. Working conditions (including existing conditions for experiments, missing conditions and proposed ways to solve those problems).
